

Fortnite Actuation Heatmap

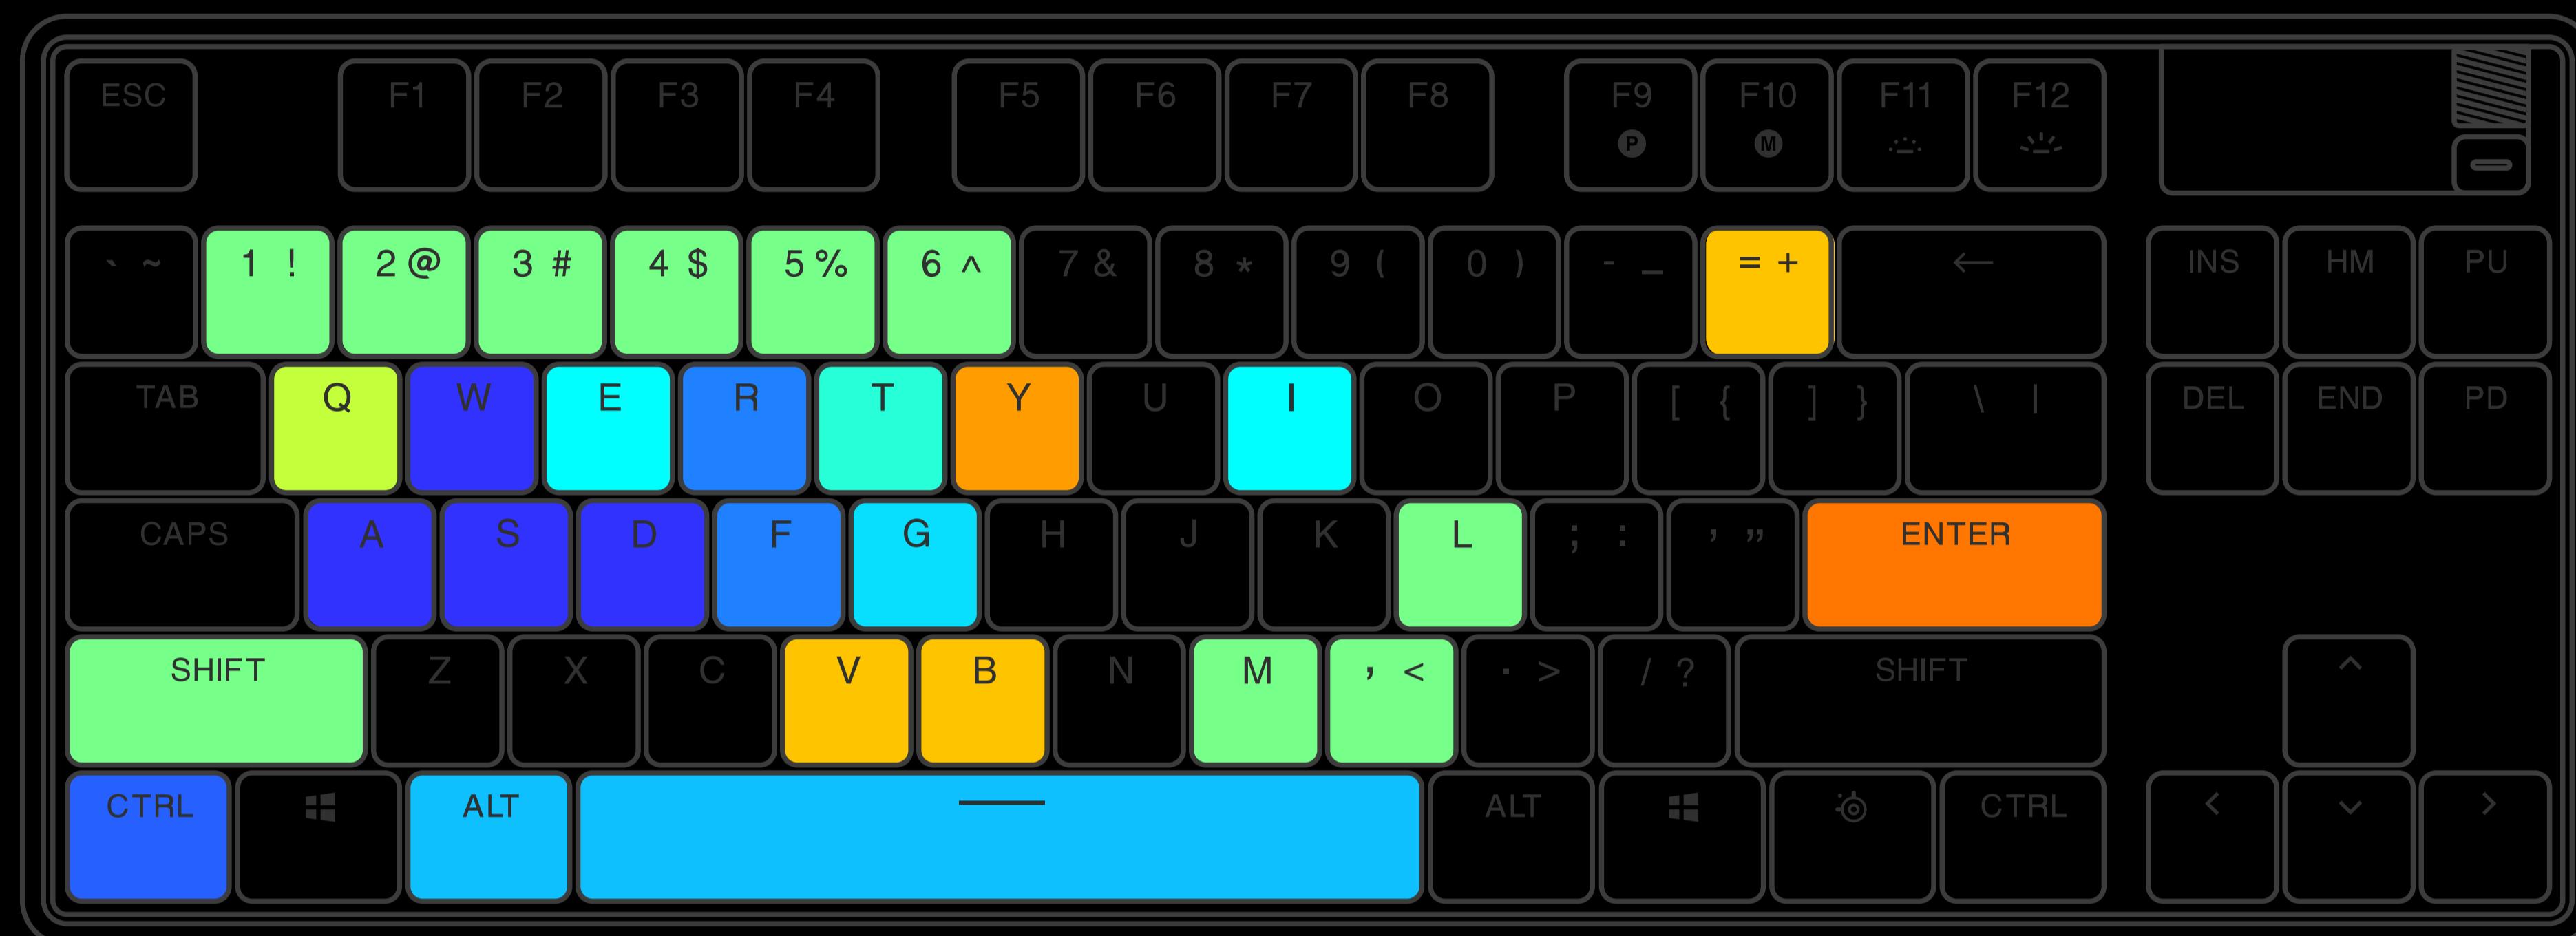

# Apex Pro TKL

As the world's fastest keyboard, Apex Pro with patented OmniPoint 2.0 switches make it the perfect choice for those looking to step up their Fortnite game. Set movement keys (W, A, S, D, L Ctrl) to very low actuation levels for ultra-responsive in-game movement. Build and action keys (R, F, G, etc.) are set to low- to mid-range actuation, around 0.6–1.6 mm. This range allows for very quick and reactive building, but is deep enough to prevent misclicks. To avoid triggering the wrong key, set a mid-range 2.0mm actuation for tool and weapon slots (keys 1–6). Non-essential utility and action keys, such as squad comms (V), map toggle (M), emote (B), and chat (Enter) are set to deeper actuation levels, typically 2–3.4 mm.

Apex Pro TKL Setup

## SteelSeries GG App Config

Here's a handy reference to the button configuration above. Go to the SteelSeries GG application > Engine > Apex Pro TKL to set the actuation for each key individually, or in groups.

1!	2 mm	Harvesting Tool	Q	2.4 mm	Switch Quickbar	Capslock	2 mm	Map (Hold)
